Projects

- **Project :1**
 - **Project Title:** DTRK and PPC Client
 - **Client:** Zebra Technologies
 - **Team Size:** 5
 - **Duration:** December,20 – March,21
 - **Role:** Software Developer
 - **Environment Used:** Xamarin, WPF, C#, Realtime Firebase
 - **Database:** Windows Registry
 - **Project Description:**
 - DTRK and PPC Client is a WPF based windows application which helps the user to monitor the device battery health. Here, the user can -
 - Check the status of battery.
 - Show Manufacture Date and Serial number of the device.
 - Show warning messages if battery health has passed the required SOH .

- Check the battery information in the Windows Registry .
 - Check the logs for tracking the application activity.
- **Responsibilities:**
 - Analyzing and understanding the requirements.
 - Developing **user interface using XAML**.
 - Developing **Multilingual support** for the application.
 - Developing the application using **MVVM structure**.
 - Co-ordinated with the testing team for bug fixes.
- **Project:2**
 - **Project Title:** LCM
 - **Client:** Zebra Technologies
 - **Team Size:** 14
 - **Duration:** Feb,21- Jun,21
 - **Role:** Automation Tester
 - **Environment Used:** Python, Robot Framework, Selenium
 - **Project Description:**
 - Zebra Life Cycle Management is a web-based application which helps the store managers to track –
 - Prices of the goods
 - Availability of the goods
 - Helps finding out defects in product
 - Keeps track on all the aisles of the store to notify the user about the availability of the goods.
 - **Responsibilities:**
 - To **develop automation test cases** for the web application.
 - Co-ordinate with all the **developers for the bug fixes**.
 - Running automation on daily basis before end of the day.
- **Project:3:**
 - **Project Title:** Android N OS Support
 - **Client:** Zebra Technologies
 - **Team Size:** 5
 - **Duration:** Jun,21- Sep,21
 - **Role:** Full stack developer
 - **Environment Used:** React, Redux, Redux-Persist, ANTD, NodeJS
 - **Project Description:**
 - Android N OS Support is web-based application used for the following purpose–
 - To track no. of devices available
 - To track the latest and old OS built.
 - To check the OS of the devices.
 - To apply latest and old updates across all the devices.
 - **Responsibilities:**
 - Understand and analyze the requirements.
 - Work extensively on **ReactJs**.
 - Developing a **responsive web application**.
 - Persist **the states after reload or closing the tabs** of browser.
 - **Interacting with client** to understand and finalizing the scope.
 - Participated in daily **scrums meets** to discuss different issues of the projects.
